Pigment Instructions & Info

Powder Pigments Non Toxic & Food Grade

Pigment Powder gives more of a translucent effect, adding more pigment will give you more of a solid colour. Add pigment into Resin (part A) and continue to add and stir until you reach colour desired, once you have added hardener (part B) the colour created shouldn't be affected. You can add more pigment once resin and hardener is mixed.

Paste Pigments

Pigment Paste gives more of a solid effect, Mix Pigment Paste 5-10% into Resin. Add pigment into Resin (part A) and continue to add and stir until you reach colour desired, once you have added hardener (part B) the colour created shouldn't be affected. You can add more pigment once resin and hardener is mixed.

Adding too much pigment will stop the process of the Epoxy Resin setting.
